

TINNITUS

About

Tinnitus is a ringing, buzzing, swishing, clicking, or other type of noise that seems to originate in the ear or head rather than from an external source.

symptoms

Tinnitus is not an illness itself but a symptom of other conditions, such as:

- Hearing loss
- Ear infection
- Ear wax buildup
- Loud noise exposure
- Ear trauma
- Certain medications
- Meniere's disease
- Brain tumors or other tumors near the ear
- Blood flow problems
- pregnancy
- anemia
- Overactive thyroid
